

25 FEB. 2011

FOREST SCIENCE

February 2011

Volume 57, Number 1

- iv Editor's Note
E.J. Green
- 1 Deep Soils
R. Harrison, D. Richter, and T. Fox
- 3 Subsurface Carbon Contents: Some Case Studies in Forest Soils
D.W. Johnson, J.D. Murphy, B.M. Rau, and W.W. Miller
- 11 Total Soil Carbon in the Coarse Fraction and at Depth
D. Zabowski, N. Whitney, J. Gurung, and J. Hatten
- 19 Stabilized Soil Organic Carbon Pools in Subsoils under Forest Are Potential Sinks for Atmospheric CO₂
K. Lorenz, R. Lal, and M.J. Shipitalo
- 26 Initial Response of Soil Carbon and Nitrogen to Harvest Intensity and Competing Vegetation Control in Douglas-Fir (*Pseudotsuga menziesii*) Plantations of the Pacific Northwest
R.A. Slesak, S.H. Schoenholtz, T.B. Harrington, and N.A. Meehan
- 36 Soil Carbon Change through 2 m during Forest Succession Alongside a 30-Year Agroecosystem Experiment
S. Devine, D. Markewitz, P. Hendrix, and D. Coleman
- 51 Carbon Inputs and Water Uptake in Deep Soils of an Eastern Amazon Forest
E. Davidson, P.A. Lefebvre, P.M. Brando, D.M. Ray, S.E. Trumbore, L.A. Solorzano, J.N. Ferreira, M.M. da C. Bustamante, and D.C. Nepstad
- 59 The Use of Ground-Penetrating Radar to Accurately Estimate Soil Depth in Rocky Forest Soils
E.B. Sucre, J.W. Tuttle, and T.R. Fox
- 67 Deep Soil Horizons: Contribution and Importance to Soil Carbon Pools and in Assessing Whole-Ecosystem Response to Management and Global Change
R.B. Harrison, P.W. Footen, and B.D. Strahm
